

To Whom It May Concern,

I have had the opportunity to work with Mehtiyeva Farah during her internship at YAŞAM Medical Center, and I am pleased to write this letter of recommendation. During her time with us, Farah consistently demonstrated a genuine curiosity about medicine and a sincere eagerness to learn.

Despite her young age, Farah's maturity and sense of responsibility stood out. She approached every task with thoughtfulness and care, showing a level of professionalism uncommon among students at her stage. Farah was not a passive observer—she actively engaged in discussions, asked insightful questions, and consistently sought to understand the reasoning behind medical decisions.

One of the first things we noticed was her natural empathy. Farah treated every patient with kindness and respect, displaying an ability to connect on a human level—an essential quality in healthcare.

She also proved to be a dependable team player. Farah worked seamlessly with our multidisciplinary staff, showing respect for every role and contributing positively to the collaborative atmosphere of the clinic.

In addition, Farah demonstrated a strong personal motivation to pursue a medical career. Her enthusiasm was evident in her willingness to stay beyond scheduled hours, her persistent curiosity, and her drive to absorb as much knowledge and experience as possible.

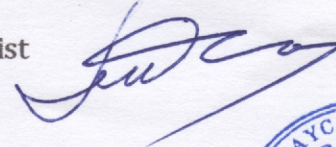

She was always willing to assist, quick to learn, and fully respectful of the professional and ethical standards upheld in our clinic. Farah integrated smoothly into our team and left a positive impression on both staff and patients.

Sincerely,

MD. Prof. Dr. Jeyhun Hajiyev

Cardiologist

To the Admission Office,

This letter serves as an official acknowledgment of Mehtiyeva Farah's successful completion of a medical internship at YAŞAM Medical Center from August 1st to August 27th. Throughout the internship, she consistently demonstrated dedication, curiosity, and a strong work ethic.

During her internship, she rotated through three departments: Laboratory, Radiology, and Cardiology. The internship was designed to provide practical experience and insight into the internal operations of these departments.

In her first week, Farah was assigned to the Laboratory department, where she was introduced to the basics of hematology and diagnostic techniques. Under supervision, she worked with essential laboratory equipment such as microscopes and centrifuges and became familiar with the procedures of blood analysis and sample preparation.

In her second week, she continued her training in the Radiology department, where she observed how medical imaging technologies, including Computed Tomography (CT), Magnetic Resonance Imaging (MRI), and Ultrasound (USM), are used in the diagnosis of various medical conditions. Farah showed a strong interest in understanding the clinical relevance of radiological findings.

Starting from the third week and until the end of her internship, she joined the Cardiology department, where she was allowed to shadow physicians during patient consultations and diagnostic procedures. She observed the use of electrocardiograms (ECGs), echocardiography, and stress tests, gaining valuable insights into the evaluation and treatment of cardiovascular diseases.

Throughout the internship, Mehtiyeva Farah demonstrated enthusiasm for learning, professionalism, and a thoughtful approach to patient care. Her diligence and active participation were highly appreciated by the medical staff. We are confident in her potential to contribute meaningfully to the healthcare field.

If you have any questions regarding her internship, please do not hesitate to contact us.

☐

Best regards,

Cardiologist, Prof. Dr. Jeyhun Hajiyev

Medical Director, Dr. Gunel Mamedova
